PEX™

https://www.pexcard.com/

PEX platform is currently being used by Spurwink. The PEX company, not built specifically for Contingency Management, is mainly used by companies and agencies to distribute bonuses and incentives to employees via debit cards.

In terms of fees, there is a set-up fee, which includes an initial number of cards. Each card over the initial number is paid per card (as of 8.16.24). Beyond this initial fee, there are no transaction fees. To fund the account, you are required to connect a bank account to the PEX platform to transfer funds into the PEX account.

Several aspects of the platform have been beneficial for the CM program: (a) The PEX platform allows for immediate transfers to debit cards, (b) tracking on all purchases made with the PEX cards, and (c) the ability to select or prohibit businesses where individuals can or cannot use their disbursements.

There is no identifying client information on the platform, which allows for the protection of PHI. Another feature beneficial for CM programs is that disbursements can only be used for transactions at businesses as opposed to ATM withdrawals. The platform also provides monthly account reports to track disbursements as well as data on percentages of disbursements that have been used by clients.

Contingency Management Innovations

https://contingency-management.com/

Contingency Management (CM) is a robust reward-based intervention built on the principles of operant conditioning to promote behavior change and reinforce positive behaviors. CM delivers tangible monetary-based rewards contingent upon targeted outcomes or behaviors.

The HIPPA-compliant program offers calculation and immediate delivery and tracking of incentives with a clinician dashboard and open APIs for connection to EHRs, along with mobile applications providing instant in-app delivery of rewards and messaging to clients. It is fully automated but can be easily adjusted and reset as needed. Full reporting functions for management, auditing, and oversight are included.
